Security for your Home and Business

Paradox EVO192 protects up to 192 points of detection in your home or business, for maximum security. Palladium can help you decide how much of that security is necessary depending on your individual space and requirements.

You can always start small and expand your security as your needs grow.

Palladium Security works with you to secure what you have while planning for future needs.

- Sensor contacts for your doors and windows
- Keypads and Palladium Interactive apps allow you to access and control your security from multiple areas
- Motion detectors secure your yard, parking lot, living spaces, offices and almost any other indoor or outdoor area that you choose

Separate Areas, Separate Security

Whether for residential or commercial application, EVO can protect up to 8 separate areas under one roof.

For example, For your home, it provides round-the-clock security for your swimming pool, ensuring your unsupervised children don't wander in, while at the same time keeps your house unarmed.

For your business, keep offices secured while keeping extended hours for your warehouse and placing access control and 24 hour security in your server room. Give user access only to employee relive to the area protected.

- Ideal for businesses with multiple sectors or departments and multi-tenant homes where separate security is a must
- Provides varying levels of security to different areas of your house or business

Remote Control Convenience

Palladium can assign a key fob to each user for simple one button control. With key fob remote controls, your security becomes that much more convenient. Personalize each remote to control your most commonly used functions and help avoid false alarms by providing a simplistic approach to security.

- Arm or disarm your system with a touch of a button
- Open and close peripheral enclosures like your gate or garage
- Generate a panic alarm
- If you are securing two separate areas, like an upper and lower apartment in the same building, each resident can control their own individual security with a separate remote control

Combining Security with Access Control

Including access control capability to provide additional control over who has access to your premises, even when your security system is not armed and you aren't there to supervise. Limit access to certain areas, disallow access to others or control entire groups of people according to their schedule or privileges.

- Make your premises inadmissible to all except those with access cards
- Track anybody who enters your premises (up to 999 people)
- Print detailed reports of access control activities
- Arm and disarm your security system with an access card, instead of a keypad

Internet and Cellular Communications

Convenience and management are key when it comes to controlling your security. With the Internet Module and GPRS/GSM Module you can monitor and control your system through an Internet web page and via text messages (SMS).

- Receive notification of an alarm, trouble or system status change (arm/disarm) with push notifications and optional emails to your cellular phone
- Palladium offers a software package to have admin fully control the system from their PC to add access cards and view all access data. Live actions from access control can be monitored.
- Users can arm/disarm the system from authorized cellular devices. Permissions are assigned individually, allowing granular control over which employees can access specific areas or system functions. The mobile app supports full administrative privileges for designated users.
- Dual path communications for monitoring can be scaled with cellular and internet options. If one fails it will fail-safe to the other

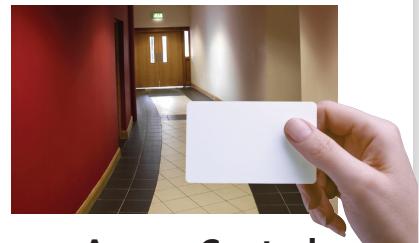

Wireless Technology

Going wireless adds virtually endless expansion possibilities to your security system. Includes remote controls for combined convenience too!

Security

Protect your premises from intruders with state-of-the-art security equipment that provides a barrier around your home or business and gives you peace of mind.

Access Control

Restrict entrance to your premises to authorized individuals and assign rights that specify which areas each person can access.

App-based System Control

Palladium Interactive Services gives you secure, real-time access to your Paradox security system from anywhere. The platform delivers a streamlined, intuitive interface that puts system status, controls, and camera views right at your fingertips. Whether you're at home, at work, or travelling, you can easily connect to your system, review activity, and adjust settings with confidence.

Unlike traditional app-based solutions, Palladium Interactive Services is powered by triple-path cellular connectivity—automatically selecting the strongest available network across Telus, Rogers, and Bell. This ensures maximum reliability, uninterrupted communication, and industry-leading uptime for your security system. With full support for both Android and iOS devices, Palladium Interactive Services transforms your Paradox system into a modern, mobile-friendly, and highly resilient security experience.

EVO192

| | |
|-------------------|----------|
| Zones | 192 |
| Users | 999 |
| Partitions | 8 |
| Access Control | 32 doors |
| Expansion Modules | 254 |

Keypads

With a selection of easy-to-use keypads, controlling your system is simple. Plus with many attractive designs to choose from you can add style to any premises.

NEware Software

Manage system users and their options, set up to 32 schedules and print reports right from your desktop with the NEware software.

Multi-path Communication

Monitor your system's status, receive notification of system events, control your system (arm/disarm, open a garage door, etc.) and report system events to the monitoring station using one or more of the following communication methods.

Basic Land Line: Palladium can connect the system to a simple phone line for basic alarm transmission

Multi path cellular: Adding our cellular communicator will transmit alarm signals with the strongest signals from Rogers, Telus or Bell

Network attached : Connecting to your LAN will allow for signals to be transmitted through your local network to allow for admin software control
